

# HYBRID BATTERY PROGRAM

NEVER TURN AWAY HYBRID BUSINESS AGAIN.

The demand for hybrid vehicles is not slowing down, and to empower your shop to capture business from dealerships, we are proud to introduce a new category of Transtar remanufactured hybrid drive batteries.

Cover the most popular hybrid vehicles on the road today, our hybrid batteries arrive as a plug-and-play direct replacement – they are ready to install and require no programming, enabling any qualified technician to perform a battery replacement.

### Why do hybrid batteries fail?

As with most batteries, hybrid drive batteries fail when they lose their ability to hold a charge.

### What is the typical cost for replacement through the original equipment provider?

Dealerships charge between \$3,000 to \$5,000 to replace a hybrid battery and usually require additional components to be purchased. Our program offers everything needed to complete the repair.

### How long will it take to replace the hybrid battery?

Two to four hours depending on the experience of the qualified technician. Hybrid drive batteries should only be replaced by a qualified technician.

### Is it true that a remanufactured battery is just a junkyard battery?

A remanufactured component is one that has been rebuilt using repaired existing components and/or new components. Hybrid batteries are completely remanufactured and tested as complete systems, including in some cases the battery computer or ECU, harnesses, copper buses, connectors, and frames. Remanufacturing provides improvements over the original OE design, compensating for weaknesses in the original design that resulted in the failure of the unit. Improvements such as sealing each individual module and using plated connectors to eliminate corrosion.

### How long will it take to get a remanufactured battery?

Product ships same day if order is placed before 1 p.m. EST.

### What are the shipping, handling, & storage requirements?

Climate control is not required but is preferred; the ideal temperature range is 60F – 90F. The batteries are best storage upright, never upside down. Air freight is available but cannot be shipped over water and therefore cannot be shipped via air freight to Hawaii or Puerto Rico.

Transtar Part Number	Make	Model	Year Range
HEV-000	Toyota	Prius	2001-03
HEV-001	Toyota	Prius	2004-09
